

Experiment – 14

Question:

Create a Virtual Hard Disk and allocate the storage using VMware Workstation.

Answer:

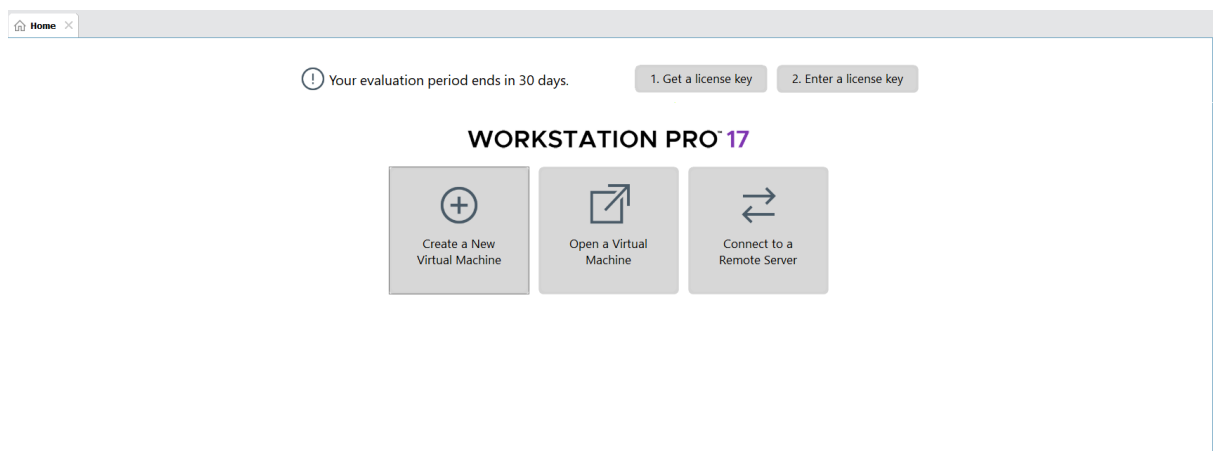

AIM: To create and allocate a virtual hard disk using VMware Workstation.

SOFTWARE REQUIRED: VMware Workstation 17, Ubuntu ISO, Host OS: Windows

PROCEDURE:

STEP 1: Launch VMware Workstation

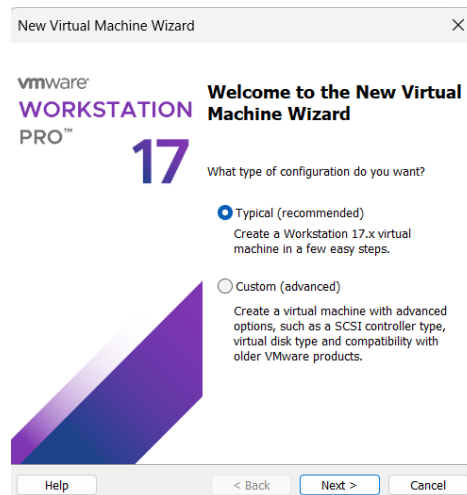

Click Start → VMware Workstation 17

STEP 2: Create Virtual Machine

Click Create a New Virtual Machine

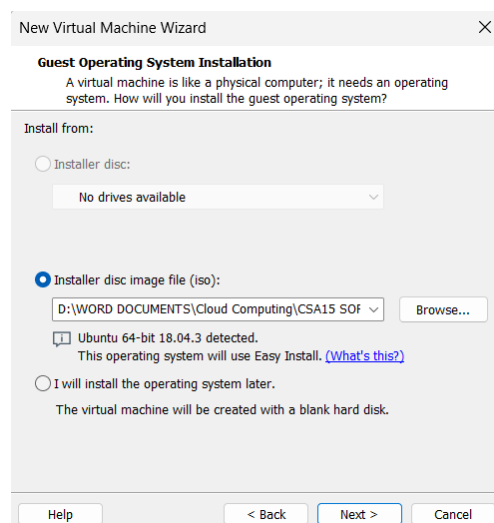

Select Typical (recommended) → Next

STEP 3: Select OS Installer

Choose Installer disc image file (ISO)

Browse and select Ubuntu ISO

STEP 4: Name VM & Location

VM Name: Virtual Machine Ex-14

Choose location → Next

The screenshot shows the 'Name the Virtual Machine' step of the 'New Virtual Machine Wizard'. The window title is 'New Virtual Machine Wizard'. The main heading is 'Name the Virtual Machine' with the subtext 'What name would you like to use for this virtual machine?'. There are two input fields: 'Virtual machine name:' with the text 'Virtual Machine Ex-14' and 'Location:' with the text 'C:\Users\Sahasra\OneDrive\Documents\Virtual Machines\Virtu'. A 'Browse...' button is next to the location field. Below the location field, it says 'The default location can be changed at Edit > Preferences.' At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

STEP 5: Configure Disk

Click Hard Disk

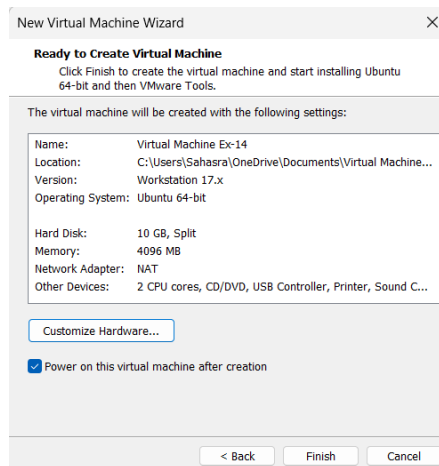

Set disk size to 10 GB

The screenshot shows the 'Specify Disk Capacity' step of the 'New Virtual Machine Wizard'. The window title is 'New Virtual Machine Wizard'. The main heading is 'Specify Disk Capacity' with the subtext 'How large do you want this disk to be?'. A paragraph explains: 'The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.' Below this, there is a 'Maximum disk size (GB):' label followed by a spinner box set to '10.0'. Below the spinner, it says 'Recommended size for Ubuntu 64-bit: 20 GB'. There are two radio buttons: 'Store virtual disk as a single file' (unselected) and 'Split virtual disk into multiple files' (selected). Below the selected option, it says 'Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.' At the bottom, there are four buttons: 'Help', '< Back', 'Next >', and 'Cancel'.

STEP 6: Finish Installation

Click Finish

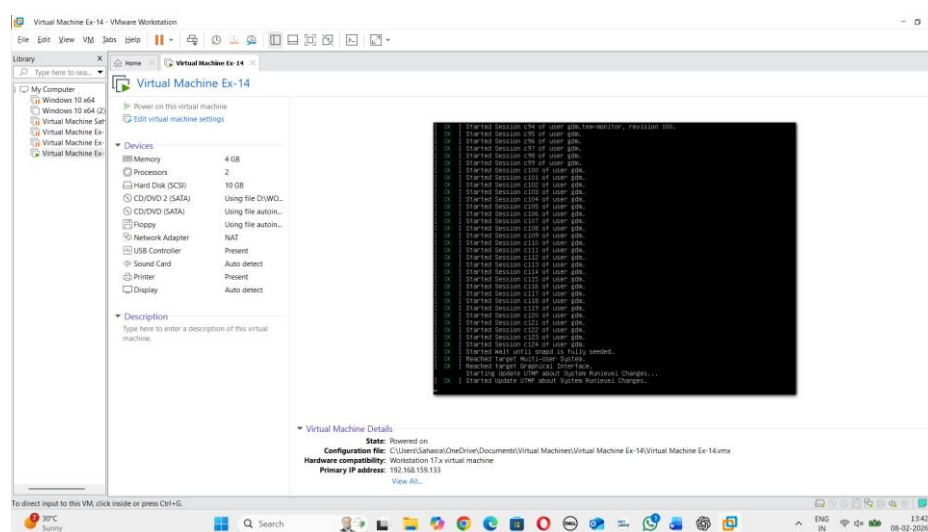

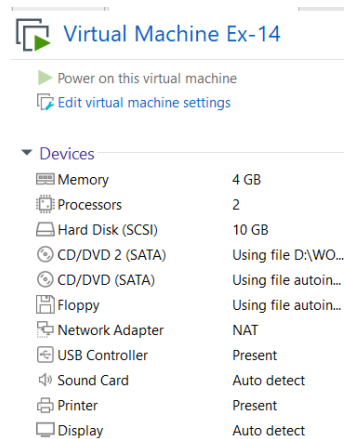

Ubuntu starts installing automatically

STEP 7: Save & Start VM

Click OK

Power ON the VM

RESULT: A virtual hard disk is successfully created and allocated.
